

## Swan 300 Safety Knife | SKS300B

---

### Swan 300 Safety Knife

---

The Swan is a fully metal detectable, disposable safety knife specifically designed to cut multi-layer paper or plastic bags and sacks.

The knife features a pointed nose to puncture into material, 'opposing slopes' at the blade exit for a

more efficient cut and a tape cutter located at the side of the knife, this is an excellent general warehouse safety knife.

The Swans blade is completely sealed against bacteria with no removable parts.

### Swan 300 Knife Advantages

---

- ✓ Detectable by in-line metal detection systems
- ✓ Visible blue colour for easy visual identification
- ✓ Multi-functional knife ideal for bubble wrap, strapping, banding, card, tape, bags, sacks, string and netting
- ✓ Guarded blades minimise the risk of injury and drawing blood
- ✓ Features a lanyard point and tape cutter
- ✓ Textured surface for firm grip, lightweight and no removable parts
- ✓ Can be used as part of HACCP and BRC procedures
- ✓ Displays due diligence in the prevention of foreign body contamination

## Product and Packaging Information

<b>Product Code</b>	SKS300B	<b>Blade(s)</b>	Straight & Tape Cutter
<b>Pack Size</b>	10	<b>Body Material</b>	ABS
<b>Pack Weight</b>	0.55kg	<b>Blade(s) Material</b>	Stainless Steel
<b>Colour(s)</b>	Blue	<b>Detectability</b>	Metal Detectable
<b>Dimensions</b>	127 x 93 x 12mm	<b>Country Of Origin</b>	Britain
<b>Type</b>	Disposable	<b>Commodity Code</b>	82119200

## Safety Certificates / Approvals

BRCGS Compliant	Made In Britain	ISO 9001:2015
-----------------	-----------------	---------------

## Metal Detectability

The Swan safety knife is moulded from an electromagnetically detectable plastic compound. The detectability of these materials will vary based upon the metal detection systems being used and their calibration. All components of this safety knife are manufactured from metal detectable polymers or stainless steel, making the product fully metal detectable. Detectability performance will vary based on, but not limited to the following factors:

- Calibration Levels
- Product Type (E.g. Wet, Dry, Frozen, Liquid)
- Aperture Dimensions
- Orientation

Orientation is a highly influential factor for the metal detectability of a contaminant that is non spherical, i.e. it will be easier to detect the contaminant when passing in one orientation compared to another - this is known as the orientation effect.

For this reason BST recommend that all our products be thoroughly tested on your metal detection systems by a trained and certified professional. It may be the case that your equipment needs to be re-calibrated in order to reliably detect this product. Such a professional should be available by contacting the manufacturer of your metal detection system.

The information provided in this product specification sheet is based on our experience and knowledge to date and we believe it to be true and reliable. This information is intended as a guide for your use of our products, the use of which is entirely at your own discretion and risk.
